In this course, we will examine psychological research and practice through the lens of gender. We will explore gender as a psychological and social construct that influences our experiences in a number of contexts. The course will address how gender, as a social identity, relates to privilege, oppression, and emotional well-being. Sample topics include: gender roles, stereotypes, gender socialization, and gender inequality. Moreover, we will take an intersectional perspective, attending to the complex ways that gender combines with race and other social identities. As we engage with a broad survey of scholarship on the psychology of gender, we will grapple with controversial issues confronting the field of psychology and consider both personal and professional applications.

Prerequisite to all upper-division psychology courses. Survey of the major content areas of psychology, introducing the basic vocabulary, concepts, principles, and theories of the discipline. Specific topics include history and methods of psychology; biological bases of behavior; sensation and perception; learning and memory; cognition, language, and intelligence; motivation and emotion; lifespan development; personality; psychological disorders; psychological treatment/psychotherapy; and social psychology. Multiple sections offered every semester.

Supervised study including an empirical data-based research project. Requires permission of instructor and department chair and completion and/or concurrent registration of less than 12 credits within the department. Students with 12 or more credits should enroll in 300 Empirical Research Project.

Understanding and analyzing data in psychology research; descriptive statistics, inferential statistics, appropriate use of statistics, use of computer to do necessary computations and data analysis. Prerequisite: PSYC 111 and Math Proficiency, QSI or MATH 115 or 111 with a grade of C or better. Multiple sections offered every semester.

This course is designed to introduce students to the principles of research in psychology. In addition to learning how to design and conduct research projects of high quality, students will develop the skills necessary to interpret and critique others’ research. Emphasis will be placed on the strengths and weaknesses of the various research designs so that students will be able to choose the appropriate methodologies to address particular research questions. The course will provide students with hands-on experience in all aspects of empirical research in psychology. This includes designing, conducting, analyzing, interpreting, and reporting their own research, as well as evaluating the research of others. Prerequisite: 221.

Supervised reading or research at the lower-division level. Approval of department chair required. Not available to first-year students.

Supervised study including an empirical data-based research project. Required permission of instructor and department chair and completion and/or concurrent registration of 12 or more credits within the department.

Reading and discussion of classic or contemporary works in psychology, moderated by a member of the Psychology Department. Interested faculty and students in other areas are welcome to participate as well. Each section of this course is typically devoted to a single work, but occasionally a group of smaller works by a single author may be selected. S/U grading only. May be repeated for credit.
The study and application of the principles of psychology to work place behavior in a wide variety of organizations (e.g., industrial/profit making, governmental, human service, non-profit, etc.). Industrial/organizational psychology attempts to answer two major questions: Why do people behave the way they do within organizations? How can we use this information to improve the effectiveness of the organization and lives of its members? Topics include selecting and evaluating employees, training and development, organizational culture, job satisfaction and motivation, leadership, communication, decision making, quality of work life, work stress and health. Prerequisite: 111 and SO, JN, or SR standing. Typically offered every other year.

**PSYC 309 Selected Topics in Psychology (2-4)**

Topics in psychology of particular relevance to the interests and needs of psychology majors and/or students in psychology. The topics for the course will be announced each semester. Prerequisite: announced with course listing. One or more sections typically offered each semester.

**PSYC 309A Psychology of Language (4)**

This course provides an opportunity to learn about language and how it is processed and understood. Topics will include speech perception, word and sentence processing, reading, discourse, sign language, language development and language disorders. Psychological and neuropsychological research and theories will be examined. Prerequisite: PSYC 111

**PSYC 309C Cross-cultural Psychology (4)**

Cross-cultural psychology examines traditional topics in the field of psychology (for example, research methods, cognition, development, emotion, psychopathology, social behavior, etc.) with a special emphasis on the comparison of these topics across different cultural groups. We will explore these topics with a particular emphasis on the methodological challenges associated with developing a scientific understanding of the influence of culture on human behavior and mental processes. Prerequisite: PSYC 111

**PSYC 309E Positive Psychology (4)**

What do people need in order to thrive? In this course we will explore topics such as happiness, meaning, human flourishing, career development, satisfaction with life, and psychological well-being. In addition reviewing the latest positive psychology research, the focus of the course will also be on application and experiential learning. This personal development course is designed for first year and sophomore students. Prerequisite: PSYC 111 and first year or sophomore standing.

**PSYC 309F Animal Minds (4)**

This class will attempt to look inside the minds of animals. It's an interesting, fun, and constantly changing field that is very accessible. We will explore issues focusing on Animal Cognition, Consciousness, Emotion, and Morality; constantly looking across species lines for commonalities and differences. The psychological capacities of human infants, children, and adults will be compared with widely varied species to understand not only how animals think, but also what makes us different. We will also discuss evolutionary theories and scientific methodologies used to explore varied minds. Prerequisite: PSYC 111

**PSYC 309J Evolutionary Psychology (4)**

This course examines the major areas of psychology from an evolutionary perspective. We will, for example, look at sensory systems, emotions, interpersonal relationships, and mental disorders and ask questions such as the following: Why did these particular attributes of human nature evolve? Why do all people in all cultures share similar sensory experiences, emotions, and developmental stages? Specific topics of study: Evolutionary psychology (EP) vs. the standard social science model; evolution by natural selection; the genetic basis for evolution; major topic areas of psychology from an evolutionary perspective, including sensation and perception, consciousness, motivation and emotion, cognition, learning, individual differences (intelligence and personality), health, abnormal psychology, the psychology of human mating, families and development, social behavior, and culture. Prerequisite: PSYC 111

**PSYC 309K The Amazing Brain (4)**

In the realm of neuroscience, truth is often stranger than fiction. Much has been learned from bizarre and unfortunate
cases of brain damage, such as the historic account of Phineas Gage, a railroad worker whose brain was penetrated by a 3’ 7” iron rod during an accidental explosion. Amazingly, Gage survived the trauma, but his personality was never the same. This course implements a cooperative learning approach to exploring what we have learned about the human brain from accidents, disease states, and other twists of fate, as well as from the study of healthy brains. Possible topics may include phantom limb syndrome, locked-in syndrome, brain death, autism, epilepsy, sleep disorders, and electrical injury. Neuroscience-related film and literature may also be explored. Finally, students will implement strategies for improving their own brain health. Student learning will be assessed in a variety of ways including in-class assignments, quizzes, discussions, group projects, papers, presentations, and exams. Prerequisite: PSYC 111 and SO, JN or JR standing.

PSYC 309L Forensic & Legal Psychology (4)
The general aim of this course is to learn about psychological knowledge as it applies to law. The course offers an overview of contemporary psychological theories, research, principles, concepts, and practices pertinent to the legal system. Although students will gain an appreciation for the culture and traditions of law, this is not a law course. The emphasis is on human behavior and mental processes and the interaction of psychology with the legal and criminal justice systems. Specific topics include psychological assessment, testing, and the law; psychology and the courts; mental health law (competencies, criminal responsibility, civil commitment; the psychology of the jury (procedural considerations and jury decision making; the psychology of evidence (eyewitness testimony, the polygraph, hypnosis, facial composites, profiling, pretrial publicity); correctional psychology; family law; juvenile delinquency and justice; criminal behavior; and the psychology of law enforcement. Prerequisite: PSYC 111

PSYC 309M Multicultural Psychology (4)
This seminar-style course will focus on the contemporary scholarship in multicultural psychology. The course will emphasize the psychological and social experience of discrimination, oppression, and privilege. Students will learn about how one's social identities (race, gender, sexual orientation etc.) make up an individual's cultural experiences. Students will be expected to explore these topics about themselves and others. The course will include readings, discussion, and experiential activities to interactively learn these topics. Prerequisite: PSYC 111

PSYC 309N Environmental Psychology (4)
Human behavior is the major contributing factor to all environmental problems we face today. Thus, if we are to understand both the causes and potential solutions to the many environmental problems our planet is facing, we need to understand how psychological principles influence the human behavior that causes those problems. We can then begin to develop strategies for addressing environmental problems based upon our knowledge of human behavior. The purpose of this special topics course is to examine psychology's role in leading society toward a more sustainable existence. We will review many of the psychological principles covered in the introductory course with the purpose of applying those principles to environmental issues. Prerequisite PSYC 111 or permission of instructor.

PSYC 309O Psychology of Political Leadership (4)
The course will examine conceptual and methodological perspectives on the psychological assessment of presidential candidates and the role of personality on political leadership. The course will cover topics such as alternative approaches to the study of personality in politics, presidential leadership and management styles, and psychological “fitness for office.” Students will participate in a group research project involving psychological and leadership assessments of the presidential and vice-presidential candidates in the 2016 election and, with the help of the instructor, will publish a series of newspaper articles dealing with the subject matter of the course. The class will be structured like a seminar or workshop and performance evaluation will be based on class discussion, participation, presentations, and short papers that will be edited and submitted for publication in the news media.

PSYC 309P The Psychology of Prejudice and Discrimination (4)
This course examines stereotyping, prejudice, and discrimination from a social psychological perspective. Students will learn about why prejudice and discrimination occur and how prejudice and discrimination can be addressed and reduced. Additionally, students will use research findings to interpret and explain real-world events and will be given the opportunity build a more inclusive campus community by identifying institutionalized policies and practices that discriminate against marginalized student groups on campus.

PSYC 309Q Cognition in a Digital Age (4)
This course will focus on research into how people’s cognition may be affected by the use of digital media and
technology as compared to more traditional ways of accessing and processing information. We will address
questions such as: How does reading text on computers, tablets, smartphones, etc. differ from reading books and
other printed materials? Is there a difference in comprehension level, attention span, the likelihood to skim, or other
variables? How does the ubiquity of smartphones and social media affect people’s attentional focus, productivity,
and emotional well-being? Can people effectively multitask or is the presence of such technology and apps always
detrimental? How does reading fake or inaccurate news affect people’s understanding of the world? After exposure
to such information, are there effective methods to combat the misinformation so that people gain a more accurate
understanding of the topic? Does easy access to Google, Wikipedia, and other online sources affect people’s idea of
what it means “to know” something? Does it affect people’s motivation to commit information to memory?
Prerequisite PSYC 111.

PSYC 310 Community Psychology (4)

Community Psychology is an applied field that uses psychology and other social science research to develop
community interventions for the purpose of preventing psychological disorder, promoting mental health, and
enhancing the quality of life for individuals and communities. As a result, community psychologists are actively
involved in the community and within community organizations. Sample topics include: Collaborative community
research, the psychological sense of community, psychological stress and social support, community and social
change, citizen participation and empowerment, and intervention in schools, human service organizations,
and the mental health system. Prerequisites: 111 and junior/senior standing. Typically offered every other year.

PSYC 311 Sport and Exercise Psychology (4)

The scientific study of the behavioral, affective, and cognitive reactions of participants and spectators to various sport
settings, with emphasis on the potential of sport to contribute to psychological health and wellbeing, as well as the
potential for sport to increase anxiety, aggression, violence, and injury. The role of the sports and exercise
psychologist is examined, including increasing the level of athletic performance, dealing with the emotional problems
of athletes, educating athletes, coaches, and spectators, and studying human behavior and mental processes in
sports settings. Prerequisite: 111 and sophomore, junior, or senior standing. Typically offered every other year.

PSYC 320 Principles of Learning and Behavior (4)

An exploration of the basic principles of conditioning and learning. The course covers the phenomena of Pavlovian
and Operant conditioning as well as their place in the larger theoretical framework of psychology. The course also
covers application of these principles to understanding social and individual behavior. Prerequisite: 111. Typically
offered every semester.

PSYC 330 Sensation and Perception (4)

An exploration of the ways in which we construct a world of things and events from the flow of stimulus energy.
Covers such topics as color vision, form perception, perception of space and movement, perceptual constancies, and
music and speech perception. Prerequisite: 111. Typically offered every year.

PSYC 331 Cognitive Processes (4)

The study of the higher mental processes. Special emphasis is given to perception, memory, attention, imagery,
problem solving, decision making, and language. Prerequisite: 111. Typically offered every semester.

PSYC 340 Physiological Psychology (4)

A survey of psychological topics of psychology from the biological perspective. Topics may include behavior
genetics, neuroanatomy, sensation and perception, learning and memory, drives, emotion, language and abnormal
behavior. Physiological psychology typically includes a hands-on laboratory component involving either empirical
research with rats or sheep brain anatomy. Prerequisite: PSYC 111 & SO, JN or SR standing. Typically offered every
semester.

PSYC 342 Psychopharmacology (4)

This course is designed to familiarize students with current drugs including antipsychotics, antidepressants,
antianxiety agents, and drugs of abuse. An emphasis will be placed on the action of these drugs at the synaptic
level, indications and contraindications for their use, and potential side effects. Prerequisite: 111. Typically offered every other year.

**PSYC 343 Health Psychology (4)**

This course will survey various models of the mind-body interaction as related to physical health. Topics may include: psychoneuroimmunology, the role of stress on mental and physical health, psychosomatic disorders, behavioral medicine, and the psychology of illness and wellness. Recommended for pre-med, pre-physical therapy, and pre-occupational therapy majors. Prerequisite: 111. Typically offered every other year.

**PSYC 347 Advanced Statistics and Measurements (4)**

Develops the most basic concepts of evaluating psychological measures: reliability, validity, and normative data and then proceeds to show how these principles can be used to evaluate new and existing measures. Topics covered include basic review of descriptive statistics, ability and achievement assessment, personality assessment, and factor analysis. Prerequisite: 221. Typically offered every other year.

**PSYC 349 Motivation and Emotion (4)**

The words "motivation" and "emotion" come from the same root: both refer to the psychological "forces" underlying action (behavior). This course will examine the biological, psychological, and social bases that consciously or unconsciously direct our behavior. Topics may include: the physiology of emotion, moral development, attachment and "free will." Prerequisite: 111. Typically offered every other year.

**PSYC 350 Social Psychology (4)**

This course reviews the major theories and methodologies in social psychology, the scientific study of how people think about, are influenced by, and behave in relation to others. The course will examine how people view themselves and others and the accuracy of those thoughts, the social forces that impact people's behavior and attitudes, and how people relate to each other (prejudice, aggression, attraction, and helping). Prerequisite: 111. Typically offered every semester.

**PSYC 360 Developmental Psychology (4)**

The study of age-related changes that occur as the individual moves through life. Major theoretical perspectives, concepts, and research methods for examining physical, cognitive, moral and social-emotional development. Prerequisite: 111. Multiple sections offered every semester.

**PSYC 370 Clinical and Counseling Psychology (4)**

The purpose of this course is to provide an introduction to the fields of clinical and counseling psychology. Major topics covered include: the historical backgrounds of these fields, the educational requirements for professionals, the use of assessment techniques and professional issues and issues related to clientele. Basic helping skills, which are useful in any form of communication, are developed. In addition, the theories most representative of the various schools of psychotherapy are explained. Prerequisite: 111. Offered every year.

**PSYC 371 Individual Learning Project (1-4)**

Supervised reading or research at the upper-division level. Approval of department chair and completion and/or concurrent registration of 12 credits within the department required. Not available to first year students.

**PSYC 380 Personality Psychology (4)**

Foundational issues in personality psychology, including the personality construct, levels of analysis in personality psychology, the nature and purpose of personality theories, and criteria for evaluating the adequacy of psychological theories. Major domains of knowledge and theoretical perspectives on the psychology of personality, including biological, psychodynamic, dispositional (trait), cognitive, affective, and social/cultural approaches. Consideration of psychological adjustment and psychopathology in relation to personality psychology. Prerequisite: 111. Typically offered every year.
PSYC 381 Abnormal Psychology (4)
This course is designed to be an overview of the various forms of abnormal behavior. Etiology, assessment, and treatment for each disorder will be included. Diagnostic classification will be emphasized. Prerequisite: 111. Offered every year, typically each semester.

PSYC 392 History of Psychology (4)
Historical analysis of psychology from the field's beginnings in philosophy and the natural sciences through the 1980s. Students will give presentations and engage in other activities (e.g., class discussion) based on their own research on the history of psychology. Prerequisites: PSYC major, Senior standing and 20 credits in psychology. Offered every year.

PSYC 393 Psychology Seminar (4)
Detailed consideration of special topic; library research and possible laboratory work included; participants will prepare and present a major paper to seminar participants. Prerequisites: PSYC major and Junior or Senior standing. Typically offered every semester.

PSYC 393A Controversies in Psychology (4)
In this discussion-based course, we will examine a number of controversial topics within the field of psychology. The main objective of the course is to help psychology majors develop informed opinions on a variety of important issues that are currently being debated in the field. Participation in class discussions will be expected of all students and will constitute a significant portion of the course grade. In addition, students will write a major paper and present it to the group; they will also lead discussions and complete frequent short writing assignments. Potential topics include the following: Is it ethical for psychologists to be involved in the interrogation of suspected terrorists? Are abstinence pledges effective in reducing teen sexual activity, pregnancy, and STDs? To what degree is the diagnosis and treatment of psychological disorders influenced by drug companies? How well does evolutionary psychology explain human sex differences? What effect does media violence have on children? What is emotional intelligence and is it a useful construct? Do certain vaccines increase the chances that a child will develop autism? What is involved in sexual orientation "conversion" therapy, and should therapists offer such treatment? Prerequisites: PSYC major and Senior standing or permission of instructor.

PSYC 393B Personality Assessment & Profiling in Criminal Psychology (4)
Psychology Seminar involves detailed consideration of a special topic and requires seminar participants to prepare and present a major paper. This section is designed to help senior psychology majors integrate diverse psychological concepts, principles, theories, and methods to the applied areas of criminal investigation. The course will draw from several areas of psychology, including the biological foundations of personality; perception and cognition; motivation and emotion; human development; personality psychology; psychopathology; and social psychology. Students will develop offender and victim psychological profiles in unsolved criminal cases. Prerequisites: PSYC major and Senior standing or Permission of instructor.

PSYC 393C Buddhist Psychology (4)
This course will explore the interface between Western and Buddhist psychologies by a re-examination of traditional substantive areas in psychology including (but not limited to): historical development, research methodology and ways of knowing, neuroscience, sensation and perception, consciousness, conditioning, cognition, motivation and emotion, personality, social interaction and psychopathology. Class meetings will be spent discussing assigned readings from both the psychological and the Buddhist literature. Students will select a psychological topic of interest, extensively research the topic from both perspectives, and prepare a term paper to be presented to the group. In addition, students will receive basic instruction in mindfulness meditation and will be asked to adopt a daily practice, journaling their reactions and experiences, as an experiential component of the course. Prerequisites: PSYC major; Senior standing or Permission of instructor.

PSYC 396 Senior Thesis (1-4)
Limited study examining a student's own researchable hypothesis in consultation with one or more department members. Prerequisites: Senior standing and 20 credits in psychology. Students typically enroll for 3 credits in Fall and for 1 credit in Spring, in their senior year.
PSYC 397 Internship (1-8)
Internship in an approved setting. Work experience in an area of applied psychology supervised by agency personnel and department coordinator. Prerequisites: Senior standing, 20 credits in psychology and approval of department chair.
